EXPERIENCE

Yosicare Private Limited | Software Developer — Coimbatore | August 2024 – September 2026

- Rebuilt existing PHP applications as Node.js applications, working from the original PHP code.
- As L2 support developer, fixed production issues with SQL and built Node.js automation scripts that cut about 12 hours of manual work per week.
- Retained an at-risk client by building a custom Node.js reporting pipeline from scratch, delivering 30 reports per month in their exact format.
- Took over 75% of a departing Data Analyst's reporting within a week by studying the existing undocumented queries; delivered provider-level usage reports for 80+ practices, used for client invoicing; appreciated by the CEO.
- Owned the "Reserve with Google" onboarding for our practice locations: prepared the entity, action and services feeds, automated part of the preparation with scripts, and got each practice's Book Online button live on its Google Business Profile; recognised by the Product Head.

KodNest Technologies | Software Developer Intern — Bengaluru | July 2023 – March 2024

- Built server-side apps with Node.js, Express.js and MySQL, and full-stack Java applications (Java, Spring Boot, HTML, CSS, JavaScript).

SKILLS

Languages:	PHP, JavaScript, SQL, Python, HTML, CSS
Databases:	MySQL, MongoDB
Backend:	Node.js (runtime), Express.js (framework), Laravel (framework)
APIs / Integration:	REST APIs, token-based auth, Microsoft Graph API, API Gateway, Postman
Cloud / AWS:	Lambda, S3, API Gateway, CloudWatch
Version control / Tools:	Git, GitHub, Bitbucket, DBeaver, VS Code

PROJECTS

ModMed EMR–Outlook Appointment Integration — *Node.js, AWS Lambda, PHP, Microsoft Graph API*

- Synced appointment create/update/cancel events between ModMed EMR and Outlook Calendar using Microsoft Graph (token-based auth), with provider-level opt-in controls.

Automated Appointment Processing (Serverless) — *Node.js, AWS Lambda, PHP, AWS S3, MySQL*

- Serverless pipeline that processes 50+ hospital appointment files (Cerner SIU/ADT) per day from S3: validates records, stores them in MySQL and triggers patient reminders, with error handling and monitoring.

AI Phone Scheduling–EMR Integration — *Node.js, AWS API Gateway, Lambda, MySQL, REST APIs*

- Built authenticated API Gateway endpoints exposing provider availability and open slots to an AI phone scheduling system, and synced appointment create/reschedule/cancel events across First Outcomes, Yosi and the EMR.

UrgentIQ EMR Integration (Bulk Appointment Pulling) — *Node.js, MySQL, AWS Lambda, CloudWatch*

- Pulled bulk appointments from the EMR via token-based APIs (with expiry validation), stored encrypted patient data in MySQL, and ran it as a Lambda workflow with CloudWatch monitoring.

EDUCATION

KGISL INSTITUTE OF INFORMATION MANAGEMENT — Coimbatore | 2021 – 2023
Master of Computer Applications — CGPA: 7.8

SRI KRISHNA ARTS AND SCIENCE COLLEGE — Coimbatore | 2018 – 2021
Bachelor of Computer Applications — CGPA: 6.9

CERTIFICATIONS

Java Full-Stack Development – **KodNest** | Responsive Web Design – **FreeCodeCamp**
